Abstract

The bedroom is an important part of the university. The stability and unity of the bedroom is an important part of building a harmonious campus. At present, there are many problems that need to be solved in the management of dormitory in colleges and universities. How to urge students to develop good habits, establish a perfect bedroom management system, guide students to form a positive bedroom atmosphere, and explore new methods and new ideas for university dormitory management are very important.

Keywords

Student bedroom, Safety management, Teach management.

1. Introduction

With the continuous expansion of colleges and universities, the number of college students is increasing, and the management of bedroom management is facing unprecedented pressure. Continuously improve the dormitory management system to provide theoretical guarantee for the construction of university dormitory culture. To this end, it is necessary to deeply analyze the main problems existing in the bedroom, avoid adverse effects, prevent hidden dangers, and lay a solid foundation for building a harmonious campus.

2. The Main Problems in the Management of College Student Dormitory

2.1. Awareness of Safety Responsibility

Safeguarding the personal safety of college students is the primary problem in the work of students, and it is also a prerequisite for the normal development of students' work[1]. With the continuous expansion of colleges and universities, the number of college students is increasing. Many colleges and universities do not meet the corresponding standards for dormitory construction, and there are serious hidden dangers in the dormitory. Summarizing the security risks of colleges and universities mainly includes the following two issues.

2.1.1. Indifference of Safety Hazards and Safety Awareness

It mainly includes private power supply and private illegal appliances. The most prominent problem with private power supply is that there are too many plug-in boards in the bedroom and many plugs. With the continuous popularization and speed of the network, it is normal for four or five electrical appliances to be connected to one power strip. The power strip is not placed in a safe position, the insulation layer is damaged seriously, the plug is not plugged in, etc. Security issues that are not valued by students are becoming more and more prominent. Private use of illegal electrical appliances is an important reason for the hidden troubles in colleges and universities. First, most of the illegal electrical appliances purchased by students do not meet the national standards, and the electrical appliances themselves have large quality

problems. Second, the students' security awareness is weak, and the map is convenient and not standardized during use and preservation.

2.1.2. Psychological Harm of College Students

The continuous expansion of college students' colleges and universities has gradually highlighted the relatively backward bedroom construction. The current group of college students is mainly composed of "post-95s" and is the leader of the most advanced ideas in the contemporary era. It is also a group of people who have a self-character tag. The "post-95s" college students showed self-centeredness, lack of responsibility and responsibility, and psychological tolerance. Weaknesses and other issues have become increasingly prominent, and there have been cases of fighting in the daily life of the dormitory, and cold violence in the dormitory is the norm[2,3]. According to incomplete statistics, 85% of students during the university have been treated with cold violence by roommates. The safety of the dormitory involved in personal injury is serious, but the occurrence is highly contingent. The cold violence between the roommates in the bedroom should be worthy of attention and reflection.

2.2. Dormitory Health

The bedroom is an important place to live and study for students during college. The health of the bedroom influence the health of everyone in the bedroom[4,5]. Online shopping and takeaways provide convenience for students, which also add a lot of domestic garbage to the dormitory. College students have weak self-care ability. During the investigation visit, most of the sleeping rooms were dirty and messy. Dirty living conditions are not only conducive to the normal development of bedroom life, but also for the bedroom Harmony leaves hidden dangers. Good hygiene conditions not only provide students with clean learning and living environment, but are also conducive to cultivating students' organization, discipline and practicality. The dedication of Kengan plays an important role in building a positive bedroom culture.

2.3. Missing Bedroom Culture of University Dormitory

In the construction of colleges and universities, more attention is paid to the study of style and discipline, and the construction of dormitory culture is relatively neglected. The university's daily management of the dormitory is more concerned with the health and safety of the dormitory[6]. The construction of the dormitory culture has always been formed by the free development of each bedroom individual. Each member of the bedroom comes from all regions, different family, and the cultural background of each locality reflected in each member is different, so the cultural traditions revealed by each member are different, and the personal habits, hobbies, personality and other aspects are different. At the same time, different cultural backgrounds have been blended and collided here. Need counseling staff actively guides the overall bedroom and cultivates the atmosphere of mutual tolerance and mutual help among the members of the dormitory.

The dormitory culture is not only the external state of the students' ideological state and value orientation, but also the reflection of the students' personal accomplishment. Through the construction of the overall bedroom culture, we can know the mental state of each student, and even the mental outlook of a grade.

3. The Adverse Effects of Dormitory Problems in Colleges and Universities

3.1. Chain Reaction of Bad Habits

The dormitory is the main place for college students to live and study. There is no corresponding dormitory management system. The bedroom is easy to become a bad habit and a "distribution place." In past management and investigations, it was learned that a large part of the bad habits of smoking and playing games were formed by university roommates[7]. Due to the long contact time with the roommates in the bedroom, coupled with the weak self-control

ability of the students, over time, they accepted many bad habits. New recently campus lending and other forms of illegal lending, the main focus is on college students, through the form of installment payment to meet their own consumer demand. After this kind of consumption concept forms an atmosphere in the bedroom, it is easy for other students to follow suit and form a bad chain reaction.

3.2. Affecting Unity and Breeding Contradictions

Good bedroom hygiene requires a complete bedroom order in the bedroom and requires the supervision of the bedroom and the interaction between the members. In the order, the members of the bedroom have established corresponding emotions, which will further promote the improvement of order. On the contrary, the poor hygiene of the dormitory, the use of illegal electrical appliances, etc., the disordered state between the sleeping rooms will aggravate the deterioration of the dormitory relationship, and the problems such as fighting and fighting, and collective use of illegal appliances in the dormitory will continue to occur, which will also hinder the students. The development of work has brought about problems for the development of the school.

4. Suggestions on the Methods of Dormitory Management in Colleges and Universities

4.1. Building a Bedroom Culture with Unified Core Values

With the continuous development of the society, and the continuous improvement of the construction of colleges, new requirements of the construction of dormitory culture are need. The construction of dormitory culture in colleges and universities is an important part of building campus culture, and it is also an important carrier for the humanistic spirit and management level of colleges and universities[8]. The construction of dormitory culture in colleges and universities should play the main role of counselors in cultural construction. Pay close attention to the problems of students' dormitory, find out the key points and difficulties of each bedroom management work, and carry out targeted rectification. Reasonable development of dormitory culture activities is an important means of shaping a positive and up-to-room culture. Activities are carried out to enrich students' spare time and enhance the feelings among members. They can be sports, activities, and entertainment. During the organization of the event and the game, the values of the members of the bedroom constantly collide with each other, and the mutual friction creates a unique bedroom culture.

4.2. Multi-Sector Collaboration to Enhance Security Awareness

Private wire and private illegal electrical appliances have always been the difficulty and focus of the management of dormitory in various colleges and universities. In the daily management work, colleges and universities, defense, logistics, and engineering departments should work together and manage together, and we must pay close attention to the problem of refractory diseases in colleges and universities. At the same time, it is necessary to improve the school rules and regulations, and the punishment for students who violate the rules and regulations must be reasonable and timely. Counselors should use classroom inspections, bedroom visits, conference meetings, etc. in daily management to promote safety knowledge to students and enhance their safety awareness. When preaching safety knowledge, it should adopt various forms and publicize from multiple angles and aspects, avoiding the tedious and monotonous explanation of safety knowledge, and making students think that the form of safety knowledge is more important than content. Using the Internet's various clients to forward security incidents to the bedroom chief through video format, organize students to watch; use the performances to rehearse the essays, cross talks and other popular programs, and to carry out security knowledge throughout, and entertain. From the source, we pay attention to students'

sense of safety responsibility. Safety awareness always keeps in mind, eliminates hidden dangers, and jointly maintains bedroom safety.

4.3. Establish A New Media Management Method

The 21st century is an era of universal Internet access. Compared with traditional visits to the bedroom, counselors should be more involved in the power of new media and conduct effective management. Every bedroom establishes a corresponding long-term dormitory through the WeChat and QQ. Teachers understand the student's day value through the video released by the bedroom director daily. Use the webcast to show excellent bedroom. The room and the poor bedroom are broadcast live, so that students can learn from it and find the lack of it. Through the new media, voting contests will be held every academic year, such as: bedroom design, bedroom cosplay contest, and red flag group competitions, etc. Preparing for the competition can promote the cooperation between the members of the bedroom and fostering feelings. Through the process of WeChat forwarding and voting, the team awareness between the members will be enhanced, and the cooperation among members will be further strengthened to improve work efficiency and strengthen management.

5. Conclusion

A good bedroom life allows students to adapt to college life more quickly and change roles as quickly as possible. Accelerate the construction of dormitory in colleges and universities, pay attention to the healthy growth of students' physical and mental health, and play an important role in the establishment of a good academic style and campus stability.
