Abstract

The prevention and control of epidemic situation is a big test. With its firm determination and resolute courage, the Communist Party of China has launched a war of resistance against epidemic prevention and control. Under the unified leadership of the CPC Central Committee, the people of the whole country have made concerted efforts to overcome the difficulties, and have achieved a good development trend in epidemic prevention and control. We must treasure the phased achievements we have made. On the basis of consolidating the original achievements, we should constantly innovate the working methods, adjust the working conditions and improve the working mechanism. We should not only have the determination to win once, but also have the perseverance to explore scientific and effective response measures based on the long-term and overall situation, continue to expand the results of the war, win the overall victory of epidemic prevention and control, and hand over a satisfactory answer sheet for the people.

Epidemic prevention and control, Party leadership, The people, Seeking truth from facts, Overall consideration.

1. The Fundamental Guarantee for Epidemic Prevention and Control: Party Leadership

The history of the Party and the People's Republic of China shows that it is precisely because we have always focused our efforts on accomplishing great things under the leadership of the Party that we have successfully dealt with a series of major risks and challenges, overcome countless difficulties and obstacles, and led the people on the road to national rejuvenation. [1]. Face since the founding of new China's most widely spreading fastest, infection, the most difficult prevention and control of major public health emergencies, the CPC Central Committee has always attached great importance to and quickly established outbreak response work leading group, xi jinping, general secretary of personally command, personally deployed several times meeting, listen to the report, made important instructions, as the epidemic prevention and control work of the current top priority to grasp, and stressed that must adhere to the national game, party committees and governments at all levels must resolutely obey the party central committee of the unified command, unified and harmonious and unified scheduling, do order, called for the party members and party organizations at all levels should play the cutting edge exemplary role and battle fortress, We will always give top priority to the safety and health of the people, and put the decisions and plans of the CPC Central Committee on the frontline of epidemic prevention and control.

Epidemic prevention and control is a comprehensive range of work, must be fully considered, the dynamic analysis, system design, and resolutely implement the responsibility main body, leading cadres at all levels should be insight into a line of prevention and control situation, conscientiously implement the party central committee all policy decisions, both to prevent elaborate and shortcomings existing in the policy implementation process, and to prevent bias

exist in the process of policy implementation and aggressive, for does not perform the leading cadres of the party central committee command to shall be investigated for responsibility, for the problems in the policy implementation process to rectify, really will be deployed into the epidemic prevention and control of the CPC Central Committee decision making visible effect. We should call on all Party members to fulfill their original aspiration and mission in the epidemic prevention and control tests, give full play to their pioneering and exemplary role, and make sure that they are able to rise in the face of danger and go out in a crisis, so that the Party flag will fly high on the frontline of the epidemic prevention and control. To give play to the role of grass-roots party organization's fight fortress, fully mobilize the masses, organize the masses, rely on the masses, the full implementation of defense from spreading measures, construct materialize tight defense, the initiative to undertake the important responsibility of epidemic prevention and control, to help people establish wars "epidemic" to win the confidence, form the "tight dragnet" outbreak.

2. The Source of Epidemic Prevention and Control: The People

Our Party has its foundation, blood and strength among the people. The most powerful force in the fight against the epidemic is the people. [2]. Throughout history, an incontrovertible truth is that mobilizing and relying on the masses is the fundamental way to win successive wars. In the face of coVID-19, a war of life and death without smoke, General Secretary Xi Jinping has repeatedly stressed the need to rely on the people to win the people's war. Only by fully respecting the subjective status of the people and extensively listening to their opinions and Suggestions; Arouse people's sense of ownership and participate in epidemic prevention and control in a scientific and rational manner; Only by mobilizing the material and spiritual strength of the people and pooling strong national cohesion, rallying point and centriforce can we build an "iron wall" for epidemic prevention and control.

The people are the subject of history, are the creator of history, the war no bystanders "disease" and the outsider, only participants and contributors, they are "risk one's life, stick to one line" of health care workers, they are the member of "burden not afraid of life and death, carry", they are "can can come at the drop of a hat, to the war" of the people's liberation army soldiers, they are "selfless dedication," busy work of volunteers, they are "unknown, pain" grass-roots workers, they are one of the ordinary you, him and me, at this moment the 1.4 billion Chinese people, into a rope, strength to make together, With its extraordinary action to compose a song of praise, condensed into the overwhelming fight against the epidemic. With the improvement of domestic epidemic situation, foreign situation is more complex and serious, and thus more to epidemic prevention and control the "input", in view of this, some foreign Chinese people take the initiative to delay back or return to isolate themselves, actively fight for strengthening domestic "epidemic" achievements made its own contribution, although they only a member of the ordinary, but in ordinary of creating extraordinary things.

3. The Key to Epidemic Prevention and Control: Seek Truth from Facts

Seeking truth from facts is the fundamental point of view of Marxism, the fundamental requirement for Chinese Communists to understand and transform the world, and the basic methods of thinking, working and leadership of our Party. [3]. The spirit of seeking truth from facts has guided our Party to several successes in its cause of revolution, construction and reform. Historical experience and lessons tell us that when we adhere to seeking truth from facts, the cause of the Party and state will develop smoothly. When facts are violated, the cause of the Party and state will suffer a setback. In the epidemic prevention and control work, General Secretary Xi Jinping also stressed the need to seek truth from facts, proceed from reality in everything, and resolutely prevent formalism and bureaucracy. To understand the current

epidemic prevention and control of the good situation in acquisition and we insist on seeking truth from facts is inseparable, to further consolidate the existing achievements, expand, comprehensive win the epidemic prevention and control of the people's war, total war, war, we must insist on the momentum, ShenZhongRuShi, on the basis of experience continue to insist on seeking truth from facts, also only then the outbreak fight victory can be achieved.

Seeking truth from facts is to explore the essential laws of things, gain the understanding of the truth of things, and on the basis of respecting the objective laws, give play to the subjective initiative of human beings. To seek truth from facts, first of all, we should proceed from reality in everything, and be realistic rather than book-oriented. Information on the epidemic should be open, real-time and transparent. We should obtain real materials through investigation and research, and formulate strategies and plans on this basis. Next to integrate theory with practice, will be coronavirus has complexity and uncertainty, for its nature and grasp still need some time, the regularity of the existing medical conditions has not been effective treatment, and therefore must explore scientific treatment on clinical treatment, in practice, effective drug treatment and promotion methods, at the same time to follow the scientific spirit to speed up the virus source and pathological study, for the effective drug, vaccine development, epidemic prevention and control to provide strong support. Finally, we should stick to the correct action orientation and reflect on the simple "one size fits all" measures for epidemic prevention and control. Grassroots workers should always adhere to the value orientation of "people first", always care for the needs of the people and what they think, and make concerted efforts to make the epidemic prevention and control work practical.

4. Important Safeguards for Epidemic Prevention and Control: Overall Consideration

The long-term historical experience tells us that overall consideration is an important guarantee for the success of a career. The prevention and control of the epidemic is a systematic project. Only by taking a holistic and coordinated approach can we win the overall battle against the epidemic. [4]. The epidemic despite showing a continuous positive momentum, but the current situation is still grim and complex, not only faced with the epidemic prevention and control and the contradiction between economic and social development, more of the challenge facing a global outbreak, this makes the epidemic prevention and control work task difficulty bigger, heavier, time is more tight, so we must adhere to overall consideration, coordinate to deal with the relationship between the epidemic prevention and control and other each work, both to the domestic epidemic prevention and control work deployment, also want to shoulder the responsibility to help the international community to jointly resist disease; We should not only focus on the frontline of epidemic prevention and control, but also focus on economic production lines to achieve overall victory in epidemic prevention and control.

Overall consideration is to take things as an organic whole, a comprehensive, connected, systematic work arrangement and deployment. Human beings are a community of destiny. We must improve our epidemic prevention and control strategies and countermeasures in time to cope with the new situation of epidemic prevention and control at home and abroad, focusing on the import of external prevention and the rebound of internal prevention, to help the international community tide over the difficulties and fight against the epidemic on the premise that the domestic epidemic situation is basically under control, to assist medical supplies and send professional medical teams to countries where the epidemic is serious, and to share useful practices in prevention and control, we will strengthen international cooperation in the development of drugs and vaccines to provide the world with a "Chinese solution" to combat the epidemic. While paying special attention to the epidemic prevention and control of international and domestic, in some conditions to take effective measures to promote to speed

up the return to work and production, to engage in economic production activities, through various preferential policies, to further activate the domestic economic and social development, focus on poverty alleviation crucial mission objectives, increase of poverty crucial project start to return to work schedule, ensure the timely realization of a well-off society in an all-round way of the goal, take the epidemic prevention and control and the double win of economic and social development.

5. Conclusion

Epidemic Prevention and control is a systems engineering, which needs strong leadership and full mobilization of the masses of the people, under the guidance of scientific methods to achieve the victory of epidemic prevention and control. At present, although the epidemic is raging and spreading around the world, as long as the international community stands united, we will be able to put the prevention and control of the epidemic into practice and achieve results.
