## Abstract

**With the development of online shopping, information maintenance is attached to consumers, and the business profit will also pay attention to Information security is necessary to take reasonable and appropriate protective measures. Personal information maintenance is regarded as a task of innovation projects, earning profits within legal scope, catering to consumer customer's personal needs, which is conducive to the integration of information security and business profit, is an innovation in information maintenance in business profit.**

## Keywords

**Information maintenance; Business profit; Innovation.**

## 1. Introduction

In today's changing development The information security needs of consumer customers are also conducive to deepening the material links between this, communicating through interest demand, innovation, reasonable, have a common place.

Commercial profit needs to be innovative, business activities need to be created, information maintenance is reasonable in business profit, there is a characteristic, the design concept is that the consumer shopping will not be intuitively exposed personal information, The use of a commercial item in a way that generates an individual's exclusive QR code, and the generated QR code only has a third-party agency that the business provider can identify, avoiding the intuitive exposure of information during the consumer shopping process, and transaction with the two-dimensional code for the propagation carrier. During the idea, specific solutions are proposed for all types of problems that may have, and there is also practical operational measures for potential risks.

The project combined with the person in charge of the individual was fraudulent. On the basis of the life experience, the project proposed a new concept, and wants more people to inspire the project, based on the benefits, pay personal data information Private documentation is protected by the company, personal private information is isolated, and the third party has entered the market with real and determined identity, providing credit guarantees for online communications, mutual certification from each other. The project carses the current demand for the rapid development of the Internet of the current data era, people have a new thing in the new day of the new month, and there is a variety of changes in life. In the moment, people's information is connected, and the link is generated. Personal information disclosure, causing fraud, so that the project came into being.

In the face of changing markets, we also hide the relevant issues, we put forward relative solutions to reduce the risk of digital transformation, increase information security protection under the situation of digital transformation, increasingly competitive In the market environment, improve product service competitiveness, in the background of diversified information age, improve personal information security and maintenance awareness, discuss with four levels of legitimacy, privacy, profitability, professionalism, provide corresponding programs .

## **2. Legality Provides Reasonable Guarantees in Business Activities in Terms of Legitimacy**

Project transactions are based on legal and regulations, and disclose customer private information for improper transactions. It belongs to illegal violations. It is not possible. At the same time, we emphasize that you must enter the market with real and reliable identity, provide real products, and the transactions have the right to confidential information about the other party's information on the other party without authorizing public information. The authenticity, security of the project, we are based on the rules. In digitized big era, law-abiding, legal is one of the foundations that business transactions can carry out.

Rational and appropriate, provide services for the corresponding personnel. The business activities are the first to be legally presumed, a good business model is based on legally regulatory, and when choosing a business project, it is one of the standards of the customer's reference. When working, it is in place whether the project task is one of the project tasks, whether it is the stage of commercial size, or the period of business activities, it is especially important. Features of legitimacy require business activities to follow certain rules of regulatory order, pay attention to the procedures and operations of the project operation. The maintenance of information security is not only the innovation of business content, but more about the stipulated new creation, customers pay attention to information maintenance, the security problem taken into account is the problem that the project proposes should resolve, the project should take the specific solution. Measures and reasonable programs. People look at personal private information, and I hope that their information security can guarantee, and maintain information security as a business activity, innovative places, and have worrying about the customer, so this is proposed Requirements, legitimacy as one of the characteristics of this business activity, is put into an indispensable label.

## **3. Privatness to Establish Solid Contacts in Terms of Profitability in Terms of Secret Security Issues**

More refunded by ordinary anti-counterfeiting technologies, but more information through network equipment security, personal information is not open, personal information is not open The network is transmitted from others, but is a two-dimensional code that is an intuitive exposed two-dimensional code. It is responsible for the third party of the corresponding work, and provides confidential guarantees during the transaction process, and commits for this process. There is a reward and punishment measures in the presence of secret security to maintain the work has been carried out. In business activities, cooperation is reached, not the deep relationship between the two sides, but the interests of the two sides are the same, the consumer demand between each other is the purpose of mutual benefit, in this series of interest exchange, pay attention to Private protection is conducive to the smooth development of the transaction, helping the interests of interests. In the trading activities, the security protection of personal information is responsibility, and it is also the need for the common interest support, and it is essential to pay attention to it, it is worthwhile and should be protected. The characteristics of privacy require business activities to pay attention to the high confidentiality of personal information, emphasizing the significant demand for consumer customers, and the activities are based on the trust and brand awareness of the customer, whether it is a deep relationship, or a strange transaction. Objects, business activity programs require responsible to take a reliable solution, with credible guarantees, customer personal information is considered to protect this requirement is especially important, and in front of customers who are not familiar, the project is responsible People have to show a sense of responsibility, with a feeling of feelings, responsible for maintaining private information security of customers, and

providing solutions for customers in business activities, showing good business capabilities and skilled professional skills, and support business activities The smooth progress.

#### **4. Profitability Provides Reasonable Material Value for Transaction Cooperation in Terms of Profitability**

Innovatively proposes customers to purchase information maintenance insurance, in which the amount is reduced, enhanced user trust, increased on the basis of profitability Credibility, facing the continuous development of communication technologies, rapidly changing modern society, supporting the economic relationship between strangers is the need for interest, the dependence on the brand, the understanding of the product, the project meets the personal information The needs of the interests, pay attention to the dependence of the online shopping platform, seize the user's maintenance awareness of information, understand the understanding of the user's needs, the idea of the idea is reasonable, and can benefit from people. Commercial trading activities, ignore economic benefits, no material value, no cost loss is impossible, economic value and material foundation as a paving, help to generate transaction behavior, which is conducive to stimulating traders' creation capabilities, The unpaid service is difficult to run in commercial transactions, and it is also difficult to support the interests of the activities. Therefore, paying attention to profit, paying attention to material value, is a factor worthy of profound thinking. The profitability characteristics require the transaction cooperation, there is a profit point, economic value, and the reasonable benefits in the business activities of mutual benefit, gain material interests can promote business people to conduct trading activities, provoked the creation of business people, promoting individuals The output of capabilities is conducive to business activities to be normal. It is an important driving force for the transaction. It has an irreplaceable role and status. It is also one of the factors that the project proposes pay attention to economic activity. It helps to carry out the normal development of the transaction process.

#### **5. Professionalism Provides A Stable Technical Support for Trading Activities in Terms of Technical Issues**

We should pay attention to network equipment safety technology, and we should also value profitable activities under infrastructure, not only need network technology engineers, but also need to be profitable services. Business, I want to use the digital transformation of the function of the big data to establish a good profit service, and will make the benefits of others and make full use of the advantages of Internet technology. Professional technology provides a stable basis for information security maintenance, showing individuals with profound knowledge, also showing personal steady cultivation skills, and professionalism makes trading activities identify and reliability, which also enables consumer customers to build trust, promote business. Continue, to establish a brand image, customer trust brand, understand the brand, further analyze the brand, and continue to strengthen cooperation between him. Professional characteristics require the person in charge to have a deep professional knowledge, have a hard personal literacy, skilled individual skills, showing their core competitiveness in business activities, promoting transaction cooperation, and promoting the rapid development of the project. Professionalism, not only requires the accumulation of knowledge level, but also requires the person in charge to actually use the knowledge to actually use the life work, pay attention to practice, emphasize the output of skills, and transform the individual's knowledge into the output of work, providing consumer customers The technical foundation of trust, demonstrates a deep personal knowledge and skilled work skills in the trading activities, and truly intellectually transforming, achieving favorable status in competing with peers, having their own advantages, catering to the growing market demand In the era of big data, standing,

standing, standing, close up to the actual needs of consumer customers, reaching the interests of common activities, promoting the active development of business activities, doing career, stable, Doing the fine, there is a strong competitiveness belonging to the market competition in the multi-end market, and it is stable in a variety of business activities. The maintenance of information security catering to the current needs of the online shopping group to personal information maintenance, in the era of major data, the innovative project has the responsibility of maintaining customer information, and there is also the ability to do exclusive services, and the innovation level is novel. On the place, there is an obligation guarantee at the level of security, there is a special service at the design technology level, there is a reasonable and appropriate process at the rules program,

Facing the diversified business needs, facing the unpredictable market trend, facing all kinds The consumer group, the project strives for accurate, efficient, reliable, safe, whether it is information maintenance, or two-dimensional code program, has reasonable solutions and effective program measures, want to combine personal experience and social practice, Transforming life social experience into actual experience worth learning, and internalization of external practical facts into reliable real experience, and converts to specific trusted method measures, combined with internal and external factors to obtain product services, promote technological innovation, Service innovation, information maintenance is new, make effective progress in the personal information maintenance work of the consumer group, truly achieved the application of the acquired knowledge, providing special information services for the company's digital transformation, participating in the fierce market competition, Obtain high efficiency, effective core competitiveness, constantly make real, exact help work for digital transformation, look back, based on the next, look at the future, to create the opportunity to create its own proprietary way Updated a better business idea, providing own answers in the vibrant social style, helping the society, acting on others, forms a profound industry influence in the rapid development of economic technology, has a deep brand competitiveness, Get more brand appeal.

I hope that in the future life plan, the maintenance of information security can constantly improve the progress, facing the large change of digital transformation with better gestures, with better appearance, using digital marketing thinking, quality business The team's formation, running, management, promotes the optimization of the supply chain and the optimization of product design, and constantly modify the improved user experience. It has deep industrial insights for industry markets. Different product services are designed for customers. Digitally During the marketing process, we want to promote fast, efficiently, efficiently, exceeding the geographic location, establish solid trust, with stronger competitiveness in the game, not only at marketing promotion More, in terms of information maintenance services, we have the uniqueness of the marketing level, across the space geographic location, establish interest demand, and then set up a trusted bridge, build a solid, reliable marketing cooperation. Have our own wonderful market competition.
